

Re: A typical research project

Repetitive (and tedious) tasks!

- **Planning and conduction of observations**
 - Observations already exist?
 - Target/sample available? visible?
- **Gathering ancillary data for the analysis**
 - Complementary information diameter, fall/find, ...
 - Context for research another population
- **Repetitive low-level analysis**
 - Spectral classification
 - Cross-matches & merges

Online resources in a nutshell

- A suite of pages, libraries, and services
 - **Providers:** data archives, catalogs, online codes
 - **Clients:** GUI, CLI, analysis tools
 - Check IVOA: <http://ivoa.net/astronomers/applications.html>

Online resources in a nutshell

- A suite of pages, libraries, and services
 - **Providers:** data archives, catalogs, online codes
 - **Clients:** GUI, CLI, analysis tools
 - Check IVOA: <http://ivoa.net/astronomers/applications.html>
- Mostly following a couple of standards
 - Common interface I/O: VOTable, json, Protocols: TAP, cone-search
 - Registries → phone book
 - Homogeneity of interface in APIs and in python modules

Online resources in a nutshell

- A suite of pages, libraries, and services
 - **Providers:** data archives, catalogs, online codes
 - **Clients:** GUI, CLI, analysis tools
 - Check IVOA: <http://ivoa.net/astronomers/applications.html>
- Mostly following a couple of standards
 - Common interface I/O: VOTable, json, Protocols: TAP, cone-search
 - Registries → phone book
 - Homogeneity of interface in APIs and in python modules
- It is **not** a one size fits all

Online resources in a nutshell

- A suite of pages, libraries, and services
 - **Providers:** data archives, catalogs, online codes
 - **Clients:** GUI, CLI, analysis tools
 - Check IVOA: <http://ivoa.net/astronomers/applications.html>
- Mostly following a couple of standards
 - Common interface I/O: VOTable, json, Protocols: TAP, cone-search
 - Registries → phone book
 - Homogeneisation of interface in APIs and in python modules
- It is **not** a one size fits all
- Resources are made **by us**, and **for us**
 - Powerful libraries and tools
 - Good practice to release data/codes Consider CDS at the very least
 - Contribute to open-source projects: `astroquery`, `sbpy`, `rocks`, ...
